Feature

- **1/2.8" Sony CMOS sensor**
2.16M Pixels(Total) / 2.12M Pixels(Active)
- **20x Optical Zoom**
Built-in 20x optical zoom lens is highly reliable.
It features auto focus, auto iris, auto D&N, zoom function.
- **Full HD Resolution**
1920x1080p 60(50)/30(25)fps
1920x1080i 60(50)fps
1280x720p 60(50)/30(25)fps
- **DAY & NIGHT (ICR)**
The ICR will automatically engage depending on the ambient light, allowing the camera to be effective in day&night environment.
- **WDR (Wide Dynamic Range)**
WDR, more effectively than previous models,
by applying an optimum fusion ratio when combining the high speed shutter used in bright areas and the low speed shutter used in dark areas.
 - Dual shutter image fusion (Max. 90dB)
 - Line by Line WDR (Max. 120dB)
- **DNR (Digital Noise Reduction, 2D+3D)**
The DNR technology eliminates noise thus generating a distinct and clear image. This camera DNR function utilizes both an adaptive 2D filter reducing noise in the brightness of the image and an adaptive 3D filter reducing noise caused by movement.
- **Privacy mask Function**
The privacy zone function makes it possible to make specific areas of the scene from view.
- **On Screen Display**
This camera supports the OSD function. And so, the camera can be controlled by selecting text displayed on the monitor screen.

- **Intelligent motion detection**

You can transmit an alert signal when it detects motion of an object on the screen. This feature is useful when you have to monitor several screens simultaneously.

- **Digital Image Stabilizer(DIS)**

The Image Stabilizer function reduces image blurring caused by, for example, vibration, which allows you to obtain images without much blurring.

- **Output**

Digital output : EX-SDI

Analog output : CVBS (※ Test Only)

- **Protocol**

This camera supports the multi-protocol (VISCA, PELCO-D, PELCO-P)

Cautions

- **Power Supply**

This camera must always be operated a 9V to 15V DC

- **Handling of the unit**

Be careful not to spill water or other liquids on the unit.

Be cautions not to get combustible or metallic material inside the body.

If used with foreign matter inside, the camera is liable to fail or to get cause of fire or electric shock.

- **Operating and storage location**

Avoid viewing a very bright object (such as light fittings) during an extended period. Avoid operating or storing the unit in the following locations.

Extremely hot or cold places (operating temperature -10 °C ~ 50 °C, however, we recommend that the unit be used within a temperature range of 0 °C ~ 45 °C)

Damp or dust place

Places exposed to rain

Places subject to strong vibration

Close to generators of powerful electromagnetic radiation such as radio or TV transmitters.

- **Handling of the unit**

Remove dust or dirt on the surface of the lens with a blower (commercially available).

Avoid the use of volatile solvents such as thinners, alcohol, benzene and insecticides. They may damage the surface finish and/or impair the operation of the camera.

Function

1. Zoom

- Max. zoom ratio
 - Optical Zoom : Max x20
 - Digital Zoom : Max x32
 - Optical + Digital Zoom : Max x640

※ Can't use Digital Zoom when the motion detection is turned on.

- Digital zoom mode
 - Combine mode

: After the optical zoom has reached its maximum level, the camera switches to digital zoom mode when zooming in. And the camera switches to optical zoom mode again after the digital zoom has reached its minimum level when zooming out.
 - Separate mode

: Optical zoom and digital zoom can be operated separately.

2. Focus

- Auto focus mode
 - Auto Mode

: Auto Focus automatically adjusts the focus position to maximize the high frequency content of the picture in a center measurement area, taking into consideration the high luminance and strong contrast components. Auto Mode is the normal mode for AF operation.
 - Interval Mode

: The mode used for Auto Focus movements carried out at particular intervals. The interval time and active time for AF movements and for the timing of the stops can be set.

Interval mode start

- Zoom trigger mode (One push mode)

: When the zoom is changed with the TELE or the WIDE buttons, the pre-set value becomes that for AF mode. Then it stops.

Function

- Manual focus mode

Focus position can be adjusted by manual only using Far/Near button or Far/Near command.

- One push trigger

: When a Trigger Command is sent, the lens moves to adjust the focus for the subject. The focus lens then holds that position until the next Trigger Command is input.

- Infinity mode

: The lens is forcibly moved to a position suitable for an unlimited distance.

- Near Limit (Focus Distance)

Can be set in minimum range of focus.

3. White balance

- Auto mode

- This mode computes the white balance value output using color information from the entire screen. It outputs the proper value using the color temperature.

- One push mode

- This is a fixed white balance mode that may be automatically readjusted only at the request of the user (One-push Trigger)

- Manual mode

- Manual control of R and B gain.

- Indoor mode

- 3700K base mode

- Outdoor mode

- 5100K base mode

- Auto-Ext mode

- This mode operating on a wider range of color temperatures than Auto mode.

Function**4. Auto Exposure****● Exposure mode****- Auto mode**

: Full Auto with Auto Iris and Shutter Speed. User can turn on/off AGC and Digital Slow Shutter feature.

- Iris priority mode

: User can set Iris Level, and shutter speed is set automatically according to the brightness of the subject. User can turn on/off AGC and Digital Slow Shutter.

- Shutter priority mode

: User can set variable shutter speed, and Iris is set automatically according to the brightness of the subject. User can turn on/off AGC.

- Manual mode

: User can set Iris, Shutter speed and Gain. User can also use Digital Slow Shutter by adjusting the shutter speed.

- Bright mode (Manual)

: User can set Iris and Gain.

※ Refer to the Exposure Control in Command List for the value range of AGC Gain, Shutter Speed, Iris and Exposure compensation.

● Exposure compensation (Brightness)

- Function to offset the internal reference brightness level used in the AE mode.

5. WDR (Wide Dynamic Range)

- The WDR function ensures that when images have been shot under conditions such as these, the images free from loss of dark detail or overexposure will be output, and it achieves this by combining a multiple number of images, shot at different exposure durations.

※ WDR doesn't work in Manual Exposure Mode and Shutter Priority Mode.

 Function**6. BLC (Back Light Compensation)**

The BLC function provides compensation by increasing the brightness of the overall screen so that subjects being shot with a loss of dark detail due to backlight will have just the right brightness level.

- ※ Can't use WDR and BLC at the same time.
(When WDR On, BLC is Off. And when BLC is On, WDR is Off)
- ※ BLC doesn't work in Manual Exposure Mode.

7. Day&Night (ICR) mode

An infrared (IR) cut-filter can be disengaged from the image path for increased sensitivity in low light environment. The ICR will automatically engage depending on the ambient light, allowing the camera to be effective in day/night environments.

- Auto Mode
: It automatically switches the settings needed for attaching or removing the IR Cut Filter. With a set level of darkness, the IR Cut Filter is automatically disabled. With a level of brightness, the IR Cut Filter is automatically enabled.
 - IR Detection
on systems equipped with an IR light, the internal data of the camera is used to make the proper decisions to avoid malfunctions.
- Ext-In Mode
: It switches to Day mode when the input from D&N-IN Port is High and switches to Night mode when it is low.

8. DIS (Digital Image Stabilizer)

The DIS function internally detects shaking of the image due to camera shaking, and performs digital compensation processing to suppress this shaking and stabilize the image output.

9. Sharpness (Aperture)

This function adjusts the enhancement of the edge of objects in the picture.

10. Freeze

It captures an image in the field memory of the camera so that this image can be output continuously.

Function

11. Privacy Mask

- Mask can be set on up to 24 places according to Pan/Tilt positions.
- Individual on/off zone masking settings.
- Two groups from among 14 colors in each group transparency can be individually set for each or 24 privacy zones.
- Interlocking control with zooming.
- Interlocking control with Pan/Tilt. (Interlock mode)
- Parameters in Visca Command (Privacy related commands in Command List)
 - Mask Number (mm)
 - : Mask A = 00h ~ Mask X = 17h
 - ※ Mask A has highest priority and Mask X has lowest priority
 - Mask setting bit (pp pp pp pp)

	pp								pp								pp								pp							
Bit	7	6	5	4	3	2	1	0	7	6	5	4	3	2	1	0	7	6	5	4	3	2	1	0	7	6	5	4	3	2	1	0

- Mask Modify setting (nn)
 - : 00h = modifying the mask size for the existing mask size
 - 01h = setting newly the mask size to default value
- Mask Center Position
 - : x (pp) = B0h(-50h) ~ 50h
 - y (qq) = D3h(-2Dh) ~ 2Dh
 - ※ Can be set in Non-Interlock mode only.
 - Fixed as (0,0) in Interlock mode.
- Mask Size
 - w (rr) = B0h(-50h) ~ 50h
 - h (ss) = D3h(-2Dh) ~ 2Dh

Function

- Mask Color (qq, rr)

Color		Code(qq, rr)	
		Non-transparency	Transparency
Black		00h	10h
Gray	Light ↕ Dark	01 h	11 h
		02 h	12 h
		03 h	13 h

Red		08 h	18 h
Green		09 h	19 h
Blue		0A h	1A h
Cyan		0B h	1B h
Yellow		0C h	1C h
Magenta		0D h	1D h

- Pan/Tilt angle (ppp, qqg)

: Range of angle (PAN : -180° ~ 180°, TILT : -90° ~ 90°)

: Angle resolution (360° / 4096)

Function**12. Motion Detection**

It instructs the camera to detect movement within the monitoring area and the send an alarm signal automatically.

- You can set up to 3 MD Window.
- When the motion is detected in the set frame, the Alarm activates through Alarm ACK and MD-Out port.
- The interval of alarm detection and dwell time can be set up to 255 seconds in units of one second.
 - Interval Time :The MD Alarm isn't activated again till the interval time passed by.
 - Dwell Time : It keeps the MD Alarm Signal (MD-Out) and MD Zoom Preset Position during the set dwell time, after the alarm activated.

13. DNR (Digital Noise Reduction)

By using both of 2D DNR (space-based) and 3D DNR (time-based), the amount of low illuminance noise has been significantly reduced and the signal-to-noise ratio(S/N) as well as horizontal resolution has been improved, resulting in a clear and sharp image display even in the dark environment.

※ If the DNR Level is set too high, the camera malfunction of image ghost can be happened in dark environment.

14. Mirror

This function reverses the video output from the camera upside down or left/right reverse.

15. HLC

Select High Light Compensation. When extremely bright light is projected to the camera masking is used on the portion to prevent partial saturation on the monitor.

16. DEFOG

Eliminate amount of fog on display screen. When DEFOG is ON, ACE and WDR function can not turn on.

17. Lens Initialize

Initialize the zoom and focus of the lens. Even when power is already on, it initialize the Zoom and the Focus.

Function**18. Comp Scan**

A pixel blemish-masking feature, which can be made to reevaluate overall CMOS pixel blemishes and mask severely flawed pixels automatically upon receiving the COMP SCAN command. This feature helps to make the flaws found in CMOS images, even after the camera has been powered on for some time.

※ When you use this function, you have to block the lens for blocking lights into the lens.

19. Custom Preset

As with the position preset function, the camera shooting conditions can be stored and recalled. The settings are recalled when the power is turned on.

Protocol**1. Timing**

As Command processing can only be carried out one time in a Vertical cycle, it takes the maximum 1V cycle time for an ACK/Completion to be returned. If the Command ACK/Completion communication time can be cut shorter than the 1V cycle time, then every 1V cycle can receive a Command.

※ 1V cycle

- 30fps mode : 33.3ms
- 60fps mode : 16.7ms
- 25fps mode : 40.0ms
- 50fps mode : 20.0ms

● Command packet (Variable packet length)

- X : 1 ~ 7 (Camera address)
- QQ : 01 (Command), 09 (Inquiry)

● Ack message packet (Variable packet length)

- Y : 9 ~ F (Camera address + 8)
- Q : 4 (Receive Ack), 5 (Completion message), 6 (Error message)
- R : Socket Number (1 ~ 3)

※ When command messages are sent to the camera, it is normal to send the next command message after waiting for the completion message or error message to return. However to deal with advanced uses, the camera has three buffers (memories) for commands, so that up to three commands including the commands currently being executed can be received. When the camera receives commands, it notifies the sender which command buffer was used using the socket number of the ACK message.
